

We need no bottlenecks on our progress as Americans. We need to remain a Country of choices. Choice that innovate and create health competition and options. Fossil fuels energy is just one example we are paying for because we stifled innovation and other alternatives.

Many of us are frequent travelers crossing numbers of radio station coverage areas all day. Satellite radio give me the choice of listening to what I wish where ever I travel. It's organized Traffic and Weather is the only organized tool I have when approaching and intend to travel through area. It is imposible, unreasonable and in complete disregard for the FCC crush such a useful innovation and expect us to have to search and learn every local radio station in our travels and figure out who is doing traffic and weather. Additionally, require us to most likley listen to all the other non-sense such as music we may not like or loud mouth DJ antics to weed out the Traffic and Weather information I need.

I pay for this service and it provides me what I am looking for with no nonsense. The National Association of Broadcasters and their petition 04-160 should be rejected by the FCC and Americans should remain with the benifits, choice and options innovation is now providing to us.

Keep in mind if the Railroad had its way, today we would not have planes and busses. I appreciate the FCC's diligence in keeping innovation and choice in our future.
